

## Fifty years of innovation

### **BusinessMan does all the heavy lifting**

A market leader in materials handling and overhead lifting capabilities, Kundel chose **BusinessMan** to facilitate and streamline their business model. **BusinessMan** allowed them to scale the technology they use from mobile devices on the shop floor and in the field to the full back office business solution in one bespoke package.

Kundel not only makes enclosed track overhead cranes with the best features, heaviest capacities and an industry leading 10:1 Safety Factor, but we also support inner-city rescue missions on a daily basis. Some of our most popular features are internal electric bar and cantilever support posts all with greater square footage coverage and longer spans even at 3 ton capacity. 1.5% of every crane sale goes directly to the missions we support like the Warren Family Mission that feeds, clothes and shelters homeless men, women and children along with the Hannah's House that is a shelter for abused, drug and alcohol addicted women, bringing them a hope for a brighter tomorrow... all free of charge.

### **Family business**

Kundel Industries started in the dining room of the Kundel family household by contractor Robert Kundel Sr. Having 30 years experience in the excavating business, family roots deeply embedded in construction and fueled by the down turn in the construction market in the late 80's Robert found himself re-evaluating his situation in construction.

The challenge of building a better box taxed Kundel's material movement ability. The numerous sub-assemblies required a constant state of transition and one large overhead crane was not going to cut it. The larger overhead crane was shut down and a series of parallel runways were hung along with multiple bridges on each set of runways. These cranes were developed by Kundel Industries engineering team by using concepts from ages past like pendulating runways and articulating bridges. These concepts provided smooth traveling second to none and reduced any stress incurred to the supporting structure. Kundel Industries will continue to not only build the best equipment in the industry, but have committed to improving and perfecting the products we produce.
